

Angie Spears

Front-end Web Developer

I am an ambitious, self-motivated and solutions-driven individual. I recognize needs, perfect the details and use strategic thinking to achieve goals. Based in New York city.

Experience

Freelance | Front-end Web Developer
Jul. 2018 - Present

Currently designing and developing dynamic websites for various small businesses and startups to connect with their customers and communicate their brands. Some technologies I am using to bring these sites to life are HTML5, CSS3, React.js, and Node.js.

General Assembly | Full Stack Web Development Immersive Student
Oct. 2017 - Jan. 2018

Developed fluency in a full-stack web development immersive program focused on core languages and best practices in object-oriented programming, MVC frameworks, and data modeling.

Youth For Tomorrow | Case Manager
Aug. 2016 - Sep. 2017

Managed the approval process of over 50 immigrant children to safely reunite them with their relatives in the United States. Used keen attention to detail, problem solving, and stakeholder management skills to complete the process.

Web Development Projects

Above All Security, LLC: [Website](#) | [Code](#)

Used HTML5, CSS3, React.js, Node.js, Express.js and other technologies to develop this website. Designed and developed the website for this security firm to connect with their customers and communicate their brand.

My Weather: [Website](#) | [Code](#)

Used HTML5, CSS3, and React.js to develop a weather application that queries the open weather map API. This app displays detailed weather information for five cities using real-time data.

Food Search: [Website](#) | [Code](#)

Used HTML5, CSS3, Express.js, React.js, and Node.js to develop a food search application that queries the Yelp API. This app allows you to search real-time data for restaurants based on the type of food and location that you specify.

Shopping List: [Website](#) | [Code](#)

Used HTML5, CSS3, and Ruby on Rails to develop a shopping list application. This app allows you to create to-do lists.

Home Search: [Website](#) | [Code](#)

Used HTML5, CSS3 and MERN Stack to develop a home search application in collaboration with other developers. This app allows you to search houses that are for sale or rent and even list a home.
